What will you study?

Spanish is the second most spoken language in the world after Chinese. There are about 400 million Spanish native speakers and Spanish is becoming the most popular and exciting new second language to learn after English. If you are passionate about Spanish and Latin American culture and want wider career prospects, Spanish should be one of your choices. Spanish combines well with other A Level choices and will give you the edge that universities and employers are looking for. Studying Spanish will widen your horizons, giving you a global view of the world and will increase your employability and experiences as a global citizen.

Future pathways

Studying Spanish can significantly enhance career opportunities in various fields, including finance, law, diplomatic services, international organizations (such as those in the health sector), engineering, teaching, translating, interpreting, journalism, politics, and business. The possibilities are limitless. You can choose a traditional route by pursuing a Spanish degree at university, or opt for an interdisciplinary program that combines language studies with subjects like science, business, accounting, European studies, or tourism. This flexible approach allows you to tailor your education to align with your specific career goals.

"Being competent in Spanish can enhance your earning power considerably and is an asset in any working environment. Major British firms have partnerships with Spanish and Latin American companies including top London employers who are eager to employ graduates with languages skills."
